Schools do not teach CT. Parents are not enabled either.

We're here to help...a first for SA.

Why kids?

Kids go through some tough decisions, and they act emotively. We also find that kids are okay with choosing between good options, but don't act when faced with picking the best of only bad options. This inaction is very damaging.

We believe that all of us go through 12 (somewhat sequential) key decision points in our lives, and if we get these right, we thrive. When we get them wrong, our life path is bent downwards. 2 or 3 bad decisions and that trajectory becomes irrecoverable - you know **many** such people:

- | | |
|------------------------|------------------------------------|
| 1. Your social circle | 7. Parenthood |
| 2. Education level | 8. Resisting (else managing) vices |
| 3. First career | 9. Personal development |
| 4. Life/work balance | 10. Entrepreneurship |
| 5. Geographic location | 11. Health management |
| 6. First spouse | 12. Financial mgnt |

Some of the benefits of Critical Thinking skills

- It is quite simply the skill of the future (see our [front page](#))
- CT is simply not taught at school, and in fact kids in SA only get exposed, tangentially, if studying Engineering or Actuarial Sciences (although some new degrees are emerging).
